

EA 04-0T10U: STATE ROUTE 12 REHABILITATE ROADWAY PROJECT FACT SHEET

Location Map
Sol 12, KP 12.7/33.2 (PM 7.9/20.6)

Project Description

This project is to rehabilitate the roadway along State Route (SR) 12 in Solano County near Suisun City, from 1.1 km east of Walter Road to Currie Road. The proposed work will include shoulder widening, left turn channelization, drainage modifications, intersection widening, vertical and horizontal alignment improvement, and pavement rehabilitation of existing roadway surface.

The Need

SR-12 is an important east-west route across Solano County. Several fatal accidents within the project limits initiated a previous roadway safety improvement project (EA 3A630), which installed “K” rails, centerline channelizers and ground-in rumble strips. The purpose of this project is to rehabilitate existing roadway and enhance safety.

Benefits

The project will rehabilitate existing roadway and provide a smoother and safer ride for motorists who use this roadway every day. The median-rumble strip and channelizers will alert motorists from crossing to the opposite lane and therefore, prevent head-on collisions. The 8-foot standard shoulders will provide refuge areas for emergency vehicles. The road profile will provide drivers with standard vertical stopping sight distance. The project will also provide the public with exclusive left-turn pockets for making left-turns at the local intersections

Current Status

The project was awarded to RGW Construction Inc. for \$20.4 million on January 5, 2009. The project is currently in construction and is expected to be complete by Fall 2011.
